

Serial No. 09/548,014

WLJ.051

Amendment dated March 9, 2004

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (canceled)

2. (canceled)

3. (canceled)

4. (currently amended): A method of depositing a metallic layer on an exposed surface of previously deposited insulating layer on a substrate, said method comprising:

treating the exposed surface with hydrogen or a gaseous source of hydrogen in the presence of a plasma; and

depositing the metallic layer over the exposed surface,

wherein the hydrogen treatment occurs prior to or during the deposition of the metallic layer, and wherein ~~the extent~~ a duration and plasma power of the hydrogen treatment are sufficient to improve the crystal orientation of the deposited metallic layer ~~is~~ such that the x-ray diffraction peak half width on a crystallographic plane of the deposited metallic layer is narrowed relative to the x-ray diffraction peak half width on the crystallographic plane of a metallic layer deposited in the absence of the hydrogen treatment.

5. (canceled)

*Serial No. 09/548,014**WLJ.051**Amendment dated March 9, 2004*

6. (previously presented): The method as claimed in Claim 4 wherein the plasma is an Inductively Coupled Plasma.

7. (previously presented): The method as claimed in Claim 6 wherein the substrate is placed on an RF biased platen.

8. (previously presented): The method as claimed in Claim 7 wherein the platen is heated.

9. (previously presented): A method of depositing a metallic layer on an exposed surface of previously deposited insulating layer on a substrate, said method comprising:

treating the exposed surface with hydrogen or a gaseous source of hydrogen in the presence of a plasma; and

depositing the metallic layer over the exposed surface,

wherein the hydrogen treatment occurs prior to or during the deposition of the metallic layer, and wherein the plasma is supplied by a Reactive Ion Etching process.

10. (previously presented): The method as claimed in Claim 9 wherein the hydrogen treatment time is less than 15 minutes.

11. (canceled)

12. (canceled)

Serial No. 09/548,014

WLJ.051

Amendment dated March 9, 2004

13. (currently amended): A method of depositing a metallic layer including using atomic hydrogen to modify the modification of its crystallographic structure of the deposited metallic layer by the use of atomic hydrogen, wherein the metallic layer is titanium or a titanium alloy and the modification includes the enhancement of the <002> crystallographic orientation of the titanium or alloy metallic layer relative to a titanium or titanium alloy layer deposited without the use of atomic hydrogen to modify its crystallographic structure.

14. (currently amended): A method of depositing a metallic layer including using atomic hydrogen to modify the modification of its crystallographic structure of the deposited metallic layer by the use of atomic hydrogen, wherein the metallic layer is copper, copper alloy, aluminum, or an aluminum alloy and the modification includes the enhancement of the <111> crystallographic orientation of the metallic layer relative to a copper, copper alloy, aluminum, or an aluminum alloy layer deposited without the use of atomic hydrogen to modify its crystallographic structure.

15. (previously presented): A method as claimed in Claim 1 wherein the metallic layer is deposited as a piezoelectric layer of an acoustic wave device.

16. (previously presented): A method as claimed in Claim 13 wherein the metallic layer is deposited as a piezoelectric layer of an acoustic wave device.

17. (original): A method as claimed in Claim 14 wherein the metallic layer is deposited as a piezoelectric layer of an acoustic wave device.

Serial No. 09/548,014

WLJ.051

Amendment dated March 9, 2004

18. (new): The method of Claim 4, wherein the x-ray diffraction peak half width on the crystallographic plane of the deposited metallic layer is less than 2.5° .

19. (new): The method as claimed in Claim 4, wherein the plasma is supplied by a Reactive Ion Etching process.
